

FREIGHTWISE Management Framework for Intelligent Intermodal Transport is an integrated project within the EU's 6th Framework Programme that aims to bring together three different sectors:

- Transport Management: shippers, forwarders, operators and agents
- Traffic and Infrastructure Management: Rail, Road, Sea, Inland waterways
- Administration: Customs, Border Crossing, Hazardous Cargo, Safety and Security

Presentations will be given at the following times showing how the FREIGHTWISE Framework has been developed and tested on actual business cases. There will be demonstrations of how harmonisation of data, architectures and messaging can promote sustainable distribution.

## FREIGHTWISE will be on Stand Z91 at the ITS World Congress Exhibition, Stockholm 22-25 September 2009
